

University of Southern California
Computer Science Department
Academic Integrity Policy

Specification and Design
of User Interface Software
Fall 2001 CSCI 588

Academic dishonesty includes (but is not limited to) the following:

- Giving or receiving information during an exam
- Collaboration among students except that which is explicitly permitted in assignments, papers or projects;
- Deception or misrepresentation in a student's dealing with the instructor, teaching assistant, or grader;
- Unauthorized or malicious use of computing facilities.

When in doubt, it is the student's responsibility to determine if a certain action constitutes academic dishonesty.

As attempt will be made to resolve a case of suspected academic dishonesty at the lowest possible level. If the student and instructor cannot reach an agreement, the case will be turned over to the Computer Science Department, and, if necessary, the School of Engineering, for resolution.

Students found guilty of academic dishonesty will usually be assigned a grade of "F" in the course. Your instructor does not believe that being forced to drop the course or being assigned a zero credit for a particular assignment, exam, paper, or project is adequate punishment for academic dishonesty.

Remember, we are here to learn, and hopefully, to enjoy the process. We should cooperate and aid each other in this endeavor, but only in an established ethical manner.

Student's acknowledgement:

I have read and understand the above academic integrity policy for CSCI 588, and I agree to abide by these rules.
